## Edison's Conquest of Mars

**Garrett P. Serviss**  
Apogee Books  
£5.95 (pbk)

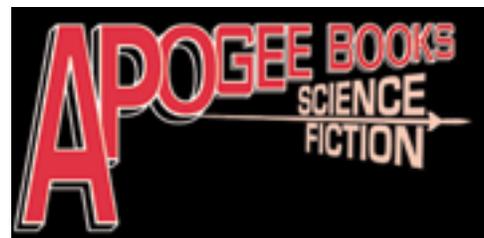

Not to be enjoyed so much as a novel, more as an intriguing and historic SF document, this is a reprint - complete with original illustrations - of a little-known 1898 'sequel' to HG Wells's classic tale of alien invasion, *War of the Worlds*. It was commissioned by the Hearst Newspaper Group to appear serialised in its newspapers across the US. Written by their science editor in conjunction with Thomas Edison, it featured a then-as-much-as-possible scientifically accurate trip to Mars. Only available on import, it can be ordered through Amazon.
