## Mars: The NASA Mission Reports Volume 2

Various  
Apogee £20.95

Away from the dumbed-down news reports and the shiny eye candy on NASA's own websites, there's a wealth of real science being done on Mars. This book collects recent NASA technical releases, with some bonus material included on a DVD. If you're even slightly interested in astronomy, you'll be fascinated by what's here. With press kit reprints, mission briefings, mission design notes and other Mars technical memorabilia, it's the next best thing to joining a lander team. **Nick Chang**

“...it's the  
next best thing  
to joining a  
lander team.”

**ISBN 1-894959-05-1**
